

The Ultimate Standing Seam Ridge Vent.

Do It Right

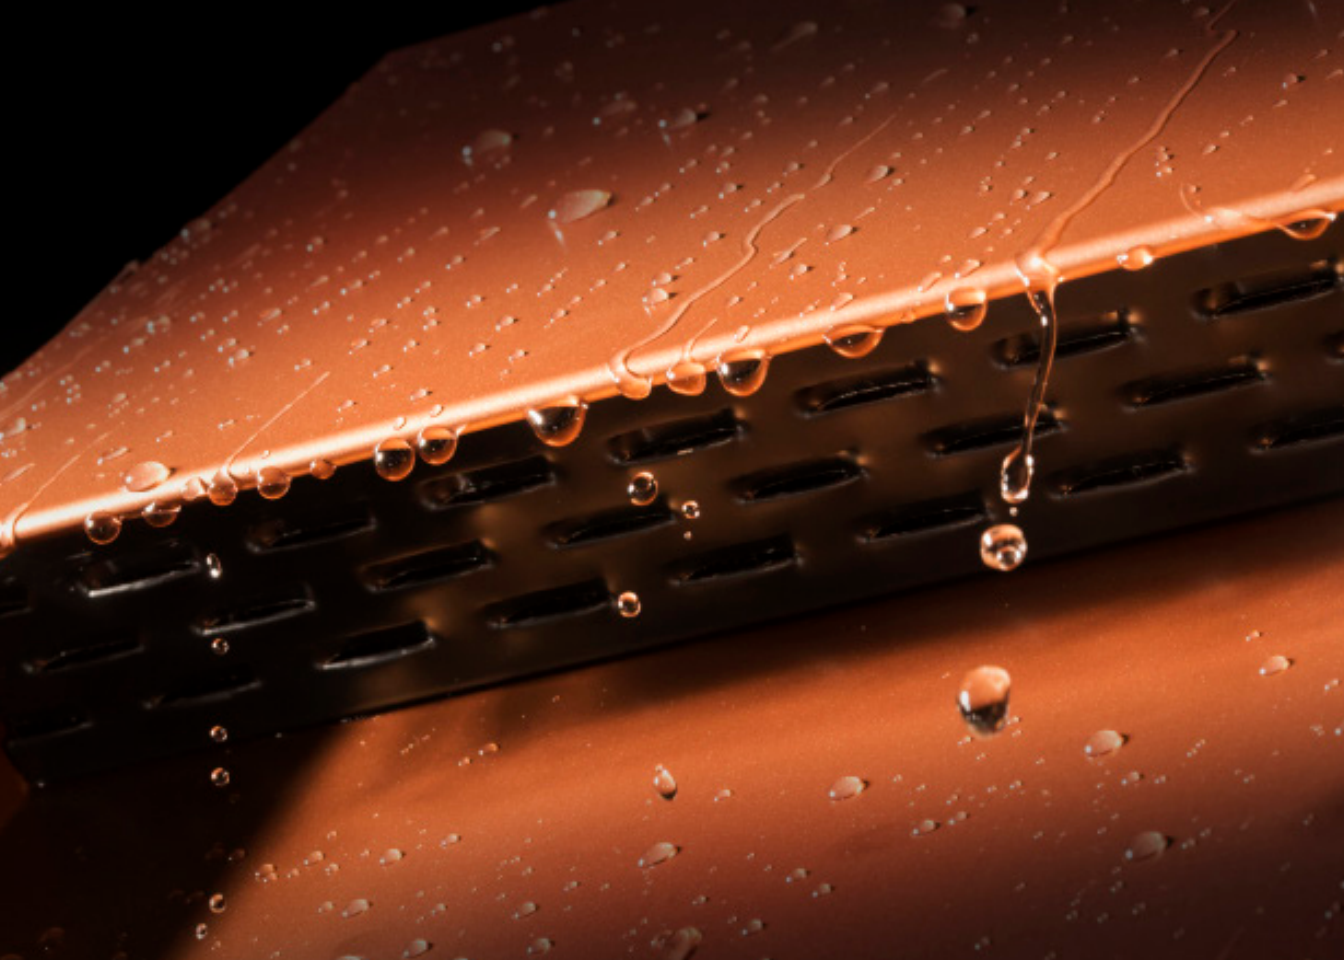

**Do It Right.
Do It Efficiently.
No More Call Backs.**

Most Standing Seam Ridge Vents are too complicated to install, wasting valuable time, and foam has too many ways it can fail.

Put that foam in its place—permanently.

You probably have experience with traditional foam ridge vents. It's only a matter of time until the foam starts working loose and then falls out from under the ridge cap. We promise—you won't have that issue with Snap-Z. With an innovative design that features absolutely no exposed foam, it's impossible for the foam to slip out of place. Install with the confidence that this ridge cap vent will last.

Guard against weather penetration.

Ridge caps must be water-resistant at all times, even in driven wind and rain or snow. Designed with zero exposed ventilation material, Snap-Z helps you protect your building from the elements. Snap-Z's unique design provides an all-weather guard against moisture while providing effective ventilation in every season.

Critter-proof your building.

Birds and rodents can cause trouble for foam ridge vents, but you won't have that problem with Snap-Z. Snap-Z ridge roof vents are absolutely bird and rodent-resistant. With no exposed foam for those pests to pick, Snap-Z lasts longer and keeps these critters out of your building. Critter-proof each standing seam roof you install with Snap-Z.

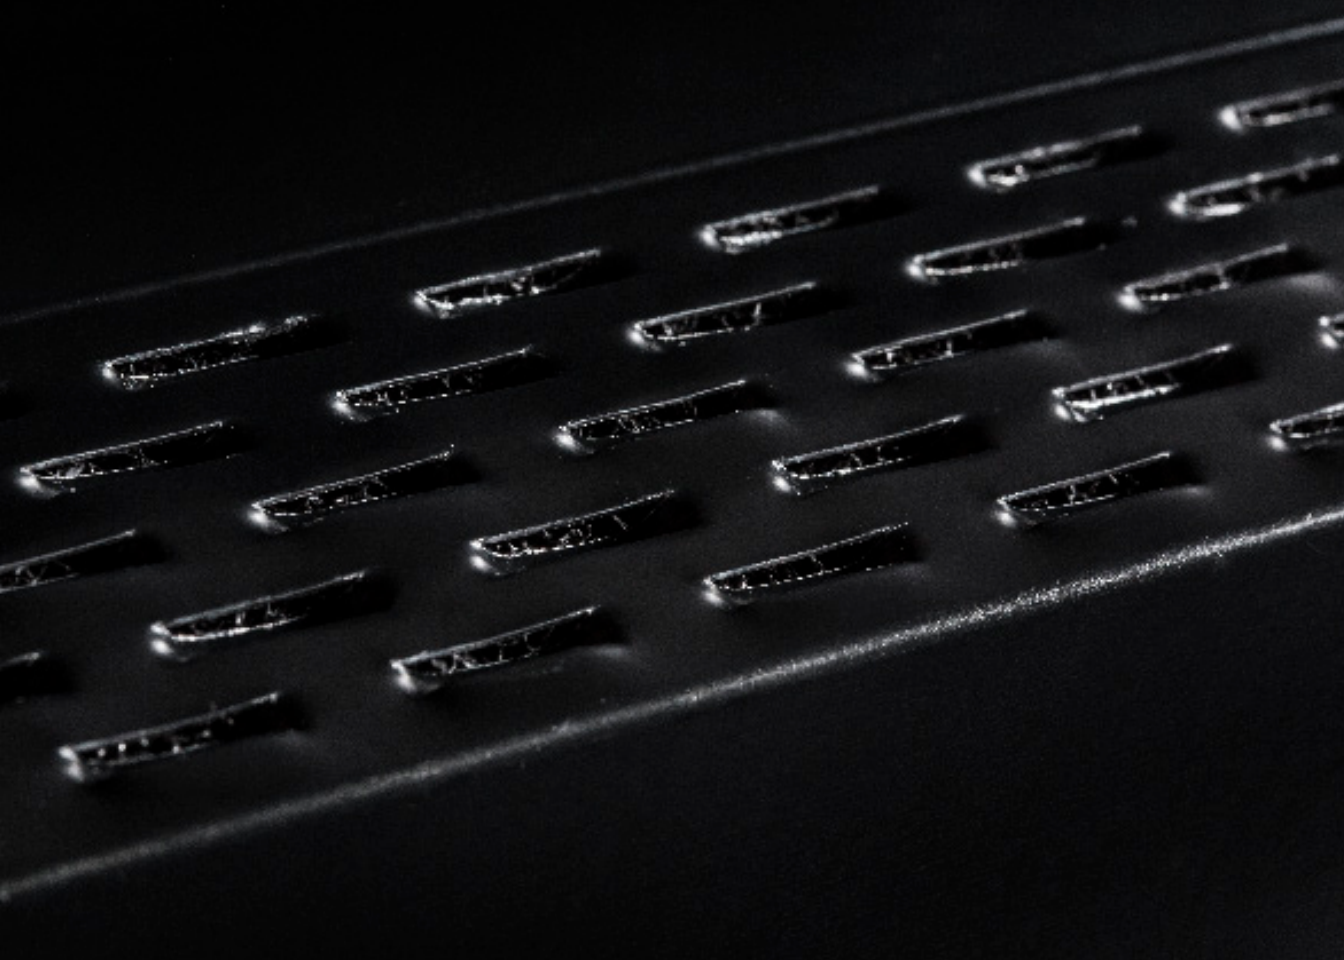

Produce great-looking workmanship.

All of the screws that hold Snap-Z roof vents in place are hidden and protected under the ridge cap. While of course this creates a clean look on the rooftop, it also protects the fasteners from the elements. It's one more feature of the practical, high-performing design that makes Snap-Z your best choice for ridge cap ventilation.

Work fast, be efficient.

Snap-Z vents are quick and easy to install, saving you time and money. The two-step installation works like this: First, position and fasten the Snap-Z vent to the metal roofing. Second attach and fasten the ridge cap onto the Snap-Z vent. You're done!

24-Hour turn-around on black.

Order Snap-Z in black and we will ship it the next day. Black gives you the most ridge vent for your money compared to other colors. The black color works great with any color roof because the color contrast is hidden in the shadow line. Save money and order black for your next roof. The color difference may not be noticeable, but the savings sure are!
